

Buildings and households

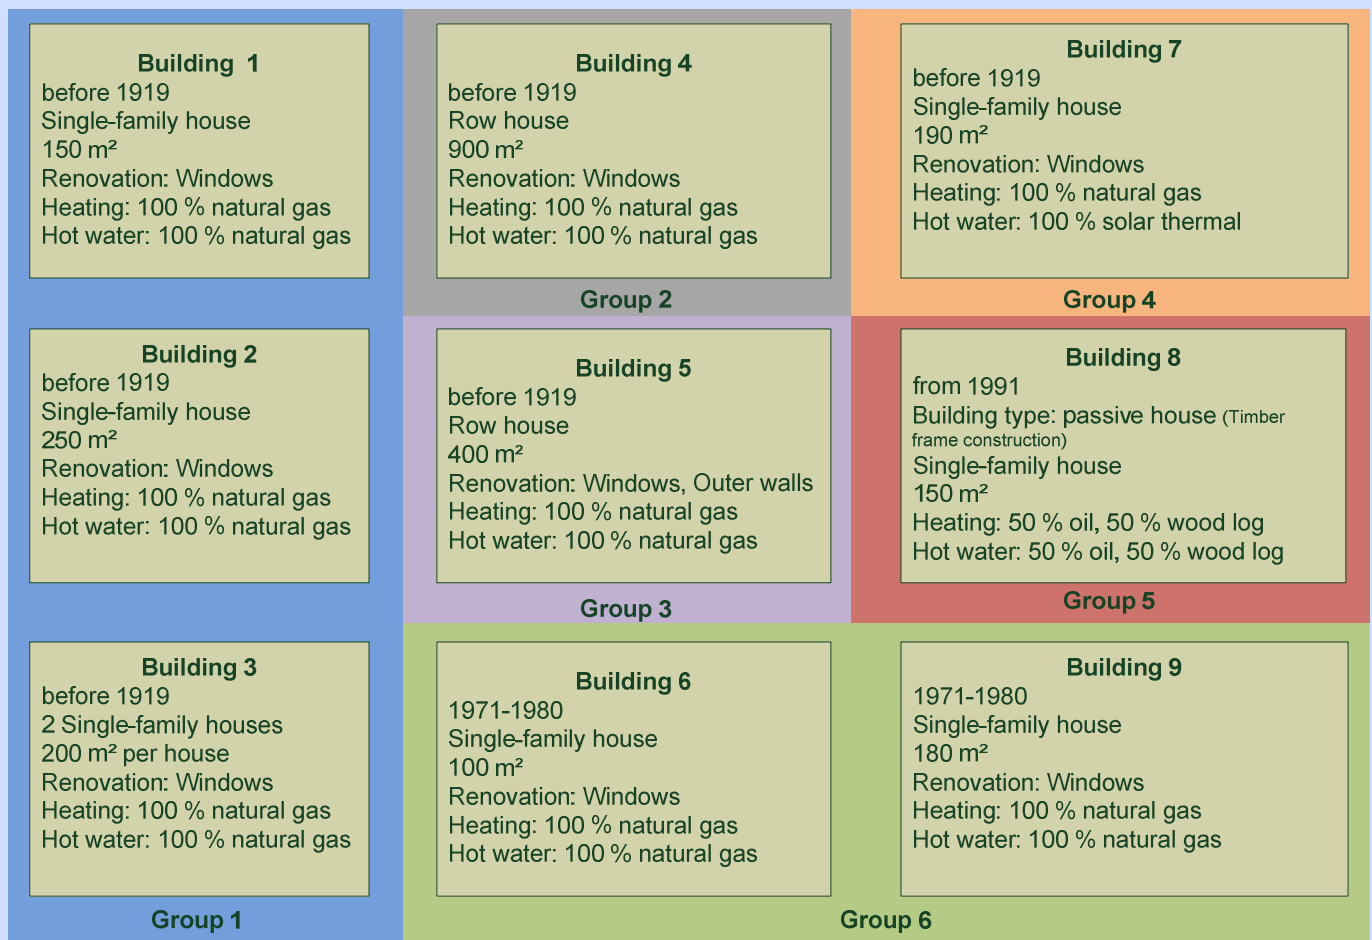

Entry buildings structure

This part of the calculator is intended to create building groups. Buildings with equal construction period, construction type, renovation level and heat supply can be grouped. If one of these four characteristics differs a separate group has to be introduced.

Important!

The calculator gives the possibility to modify the building groups in the „Planning Mode“ after „Status-Quo-Analysis“. But every planning option can only be applied for the whole building group! If you already know that a part of the building group should be treated different like the rest (e.g. partial refurbishment and deconstruction), you should create separate groups here.

The following illustration show how such building groups could look like:

In summary for this example 6 building groups have to be added to the calculator.
